Art Unit: 2816

#### **DETAILED ACTION**

Claims 1-9 are presented in the instant application according to the Applicants' filing on 11/14/2003.

#### Claim Objections/Minor Informalities

1. Claim 5 is objected to because of the following informalities:

Line 11, it is suggested to change "informations" to --information-- to be consistent with line 8.

Appropriate Correction is required.

### Inventorship

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

### Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Application/Control Number: 10/713,365

Art Unit: 2816

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000.

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1-2 and 5-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Kojima (U.S. Patent No. 6,944,801).

With respect to claims 1 and 5, Kojima discloses, in Fig. 1, a semiconductor apparatus having a delay monitor circuit for monitoring critical path delay characteristics of a target circuit including a plurality circuits operating at a plurality of different clock frequencies, wherein the delay monitor circuit comprises delay means [1611...16NM] having a plurality of delay elements [1611...16NM] for forming delay element arrays accordance with supplied configuration information [from 140] including a delay component to cause a signal propagation delay in the target circuit [10]; plurality registers [170, 270] for setting therein plurality of configuration information for forming the delay element arrays [1611...16NM] in accordance with the plurality of different clock frequencies; first switching means [300, to output 110 based on inputs from registers 170 & 270] for selectively switching the configuration information of the supplying the plurality of registers and supplying the configuration information [from output of 140] to the delay means; second switching means [151... 15N; 251...25N] for selectively switching the plurality of different clock frequencies for supplying to the delay means.

With respect to claims 2 and 6, Kojima discloses, in Fig. 1, the first switching means switches the configuration information of delay element arrays set plurality of registers [170,

270] a time sharing way manner and supplies the configuration information to the delay means [1611...16NM]; and the second switching means [151...15N; 251...25N] switches the plurality different clock frequencies time sharing manner for supplying to the delay means [1611...16NM].

#### Allowable Subject Matter

- 5. Claims 3-4 and 7-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 6. The following is a statement of reasons for the indication of allowable subject matter:

  The closest prior art of record does not show or fairly suggest a semiconductor apparatus having a control means for controlling a power source voltage for supplying to a target circuit based on delay information generated by a delay element array formed in a time sharing way manner, as called for in claims 3 and 7.

#### Citation of Relevant Prior Art

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Prior art Kosper et al. (U.S. Patent No. 6,629,250) discloses an adjustable data delay using programmable clock shift.

## Inquiry

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Linh M. Nguyen whose telephone number is (571) 272-1749. The examiner can normally be reached on Alternate Mon, Tuesday - Friday from 7:00 to 4:30.

Application/Control Number: 10/713,365 Page 5

Art Unit: 2816

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Timothy Callahan can be reached on (571) 272-1740. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
